Airbnb — Series B (2011), reconstructed

Marketplace for short-term stays — global category leader

Reconstructed case study for DueDil.Agent testing · founded 2008 · San Francisco, USA · figures as of 2011 (Series B era)

About this document

This is not the company's original pitch deck. It is a summary written from publicly reported facts so that DueDil.Agent has realistic input; the sources are listed on the last page. Where a figure is not public, the deck says [NOT_FOUND] on purpose — the pipeline is expected to flag it rather than guess.

Problem

Travellers pay hotel prices for accommodation they do not want; homeowners sit on unused space they cannot monetise.

Solution

A two-sided marketplace: hosts list space, guests book it. Trust is handled by profiles, reviews and verified payments.

Market

Global travel accommodation. Public analyses put the addressable market in the hundreds of billions of dollars; Airbnb itself has never published a TAM for the 2011 round.

Traction (2011)

Airbnb reported roughly 1 million nights booked and listings in the tens of thousands across more than 10,000 cities.

Business model

Commission on each booking, charged to guest and host. No inventory ownership, no property leases.

Team

Brian Chesky (CEO), Joe Gebbia (CPO), Nathan Blecharczyk (CTO). Company headcount at the time: about 40 people.

Funding

Series B, July 2011: $112M led by Andreessen Horowitz, valuing the company at about $1.3B.

Later reality (context for the reader)

By its 2020 IPO Airbnb had become a public company; this deck describes the 2011 position only.

ARR

Not disclosed in 2011 — the company reported bookings and nights, not recurring revenue.
