Cursor (Anysphere) — reconstructed case study

AI-native code editor — the fastest-scaling B2B software story to date

Reconstructed case study for DueDil.Agent testing · founded 2022 · San Francisco, USA · figures as of 2025

About this document

This is not the company's original pitch deck. It is a summary written from publicly reported facts so that DueDil.Agent has realistic input; the sources are listed on the last page. Where a figure is not public, the deck says [NOT_FOUND] on purpose — the pipeline is expected to flag it rather than guess.

Problem

Developers spend more time reading and editing code than writing it; existing assistants autocomplete lines, not intent.

Solution

An editor built around a model that understands the whole repository: multi-file edits, refactors and questions answered in place.

Traction

Reported ARR passed $100M within roughly two years of launch, then $500M (mid-2025); vendor and press reporting put it above that by the end of 2025.

Growth

Reported as the fastest B2B software company to reach $1B ARR — roughly two years, against five to seven for the previous generation of SaaS leaders.

Team

Founded by Michael Truell, Sualeh Asif, Arvid Lunnemark and Aman Sanger; engineering-heavy organisation.

Business model

Per-seat subscription, individual developers and enterprise teams, billed monthly or annually.

Funding

Series D, November 2025: $2.3B raised at a $29.3B valuation.

Market

[NOT_FOUND] — no audited TAM was published with the round.
