Lovable — reconstructed case study

Prompt-to-app builder — Europe's fastest-growing software company

Reconstructed case study for DueDil.Agent testing · founded 2023 · Stockholm, Sweden · figures as of 2026

About this document

This is not the company's original pitch deck. It is a summary written from publicly reported facts so that DueDil.Agent has realistic input; the sources are listed on the last page. Where a figure is not public, the deck says [NOT_FOUND] on purpose — the pipeline is expected to flag it rather than guess.

Problem

Building a product still requires writing code. Non-technical founders and product teams cannot turn an idea into working software.

Solution

Describe the app in natural language; Lovable generates a full-stack web application, deployable and editable.

Traction

Crossed $100M ARR around eight months after launch; reported to pass $400M ARR by early 2026, adding roughly $100M of revenue in a single month.

Efficiency

The company reported reaching that run rate with about 146 employees — an unusually high revenue-per-headcount ratio.

Business model

Subscription with usage-based credits; free tier feeding self-serve conversion.

Team

Co-founded by Anton Osika. Small, senior team; heavy automation instead of headcount.

Funding

$400M round at a $13.3B valuation, following earlier rounds through 2025.

Market

[NOT_FOUND] — no audited TAM was published with the round.
